Selected Courses

Cyber security basics

This Course aims to introduce young people to the science of cybersecurity, such as sections and requirements, networking science, operating systems, dealing with the command line, encryption and its types.

★ 4.9(40)

python language

This course aims to introduce young people to the concept of digital systems, types of programming and their importance, and to enable the trainee to learn the most important programming rules that help him build simple programs in the Python language.

★ 4.8(33)

Flutter Flow

In this course, we seek to enable young people to build their own application, starting with learning about the concept of building mobile applications, knowing the concept of Low-code, and using the Flutter Flow framework to build mobile applications without the need to write code.

★ 4.9(23)

UI/UX design

This course aims to understand the user interface (UI) and user experience (UX), and learn about the difference between them to build application or website interfaces that are easy to use and attractive to users.

★ 4.5(20)

Java language

This course aims to introduce young people to the concept of programming, to enable the trainee to learn the most important programming rules that help him build simple programs in the Java language.

★ 4.8(35)

PHP language

This Course aims to introduce young people to the concept of digital systems, types of programming and their importance, and to enable the trainee to learn the most important programming rules that help him build simple programs in the PHP language.

★ 4.5(18)

Parent Review

Ahmad ali

★★★★☆

they provided a great environment for my child to learn.

Sara omar

★★★★★

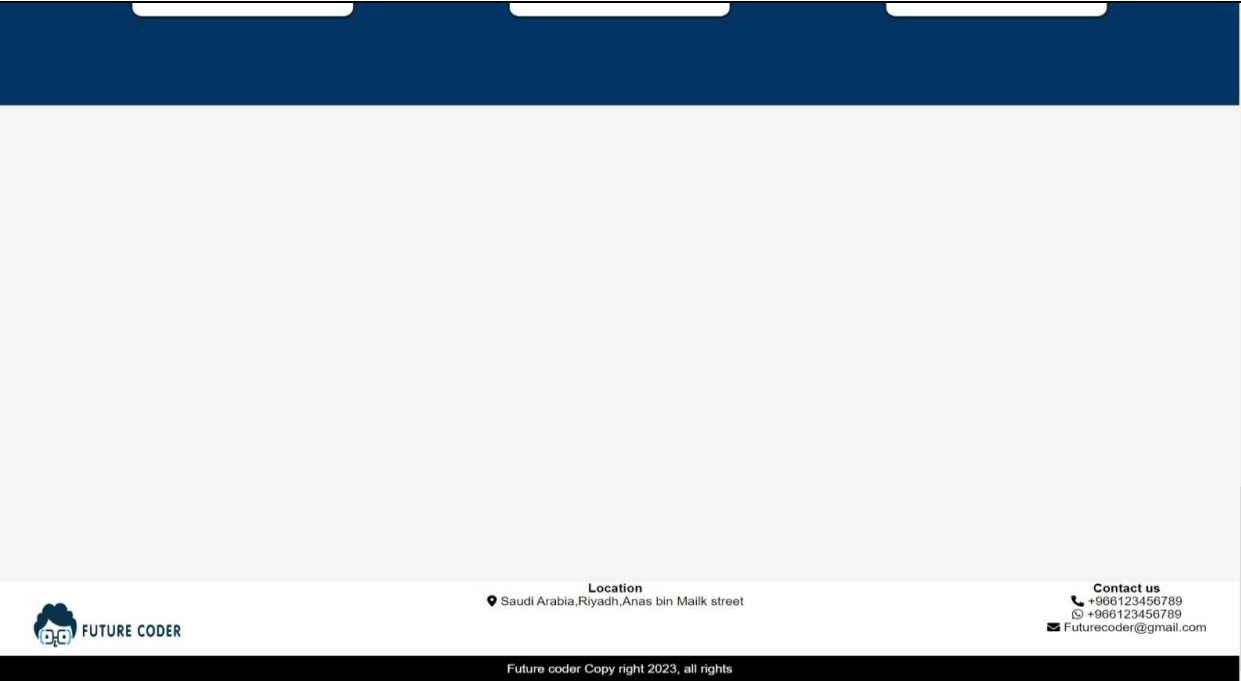

I would want to express my gratitude to the team for creating this website, which has been really helpful to me.

Nora saud

★★★★☆

They tutor have a good technique for teaching.
